Vancouver, WA 98661

Dear Scott Alvarez:

I learned of the **Dental Laboratory Technician** position with your business through The Oregonian newspaper. I think you will find both my education and experience a valuable asset to your business as you seek to fill this position.

I recently graduated with an Associate of Applied Science degree in Dental Laboratory Technology from Portland Community College. I am skilled in all aspects of making or repairing dentures, crowns, bridges and other dental prostheses. I have ten years' experience designing and pouring molds from plaster to silicone utilizing advanced mold making techniques such as slip cast, injection, and die cast molds. I also have experience working in dental laboratories as a technician specializing in crowns and bridges, as well as a denture finisher. I also am proficient in many computer processes including Excel, CAD/CAM, Advanced Scheduler, and Photoshop. I am highly committed, quality oriented and well trained for a challenging job, and I have an excellent track record for maintaining strict adherence to order specifications and for providing the highest standard of work.

I look forward to working for you and request an opportunity to interview at your convenience. Thank you for your consideration.

Cordially,

Jack Miller
