Enter=SAVE
ESC=CANCEL

USE ← AND → TO OPEN CHOICES

Press **ENTER** to save these settings.

All entries on the input line should be followed by hitting **ENTER** . This is how you let the calculator evaluate what you entered.

Basics

$5 + 3$	Performs addition.
$10 - 7$	Performs subtraction.
$6 * 4$	Performs multiplication.
$5 / 4$	Gives $\frac{5}{4}$.
9^2	Squares 9.
2^{10}	Raises 2 to the tenth power.
-6	Gives negative six by hitting (-) . Do Not use (-) .
$-8 * (-4)$	Is the product of two negative numbers.
$5 - 6 / 2 + 1$	The calculator uses the order of operations from math.
$(5 - 6) / (2 + 1)$	The grouping symbols make the calculator do what's in the parentheses first.
$(3 * 4)^2$	This multiplies first.

To clear the stack you press **F1** **8** .

The **CLEAR** key clears the input line.
