

## Week 1 Practice Worksheet

### Angles, Arc-length, and Periodic Functions

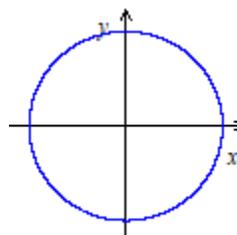

1. a. Draw  $140^\circ$  in standard position on the provided coordinate plane.

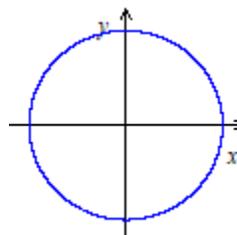

- b. Draw  $-250^\circ$  in standard position on the provided coordinate plane.

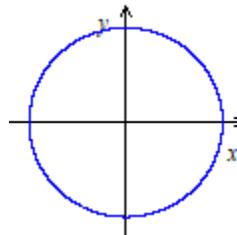

- c. Draw  $\frac{4\pi}{5}$  radians in standard position on the provided coordinate plane.

- d. Draw 4 radians in standard position on the provided coordinate plane.

- d. Draw  $-3$  radians in standard position on the provided coordinate plane.

2. The Greek letters  $\theta$  and  $\phi$  are often used as variables in mathematics. They are **different** symbols so it's important to distinguish between them. Which of these symbols is pronounced "phi"? And which is pronounced "theta"?
3. a. Convert  $\frac{\pi}{10}$  radians into degrees.
- b. Convert 4 radians into degrees.
- c. Convert  $10^\circ$  into radians.
- d. Convert  $140^\circ$  into radians.
- e. Convert  $1200^\circ$  into radians.

4. a. Find both a positive and a negative angle that are coterminal with  $140^\circ$ .  
(Answer in degrees.)
- b. Find both a positive and a negative angle that are coterminal with  $-\frac{5\pi}{8}$ .  
(Answer in radians.)
- c. Represent infinitely many different angles that are coterminal with  $70^\circ$ .
- d. Represent infinitely many different angles that are coterminal with  $\frac{3\pi}{5}$ .

5. Complete the table below.

$\theta$ (degrees)	$0^\circ$	$30^\circ$		$60^\circ$	$90^\circ$		$270^\circ$	$360^\circ$	
$\theta$ (radians)			$\frac{\pi}{4}$			$\pi$			$20\pi$

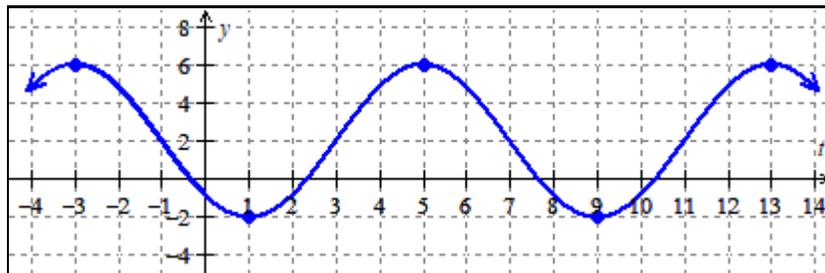

6. What is the length of the arc spanned by the angle 4 radians on a circle of radius 20 yards?

7. What is the length of the arc spanned by the angle  $25^\circ$  on a circle of radius 30 inches?

8. What is the length of the arc spanned by the angle  $\frac{4\pi}{5}$  radians on a circle of radius 15 feet?

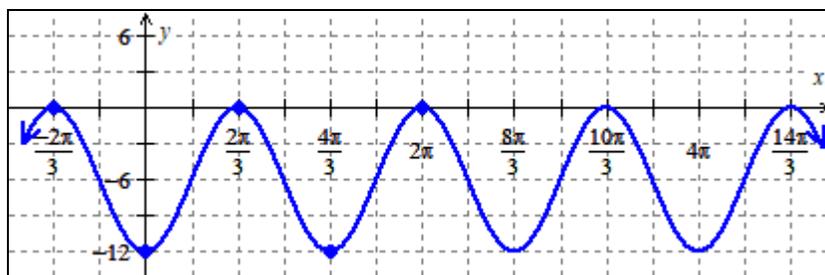

9. What is the length of the arc spanned by the angle  $135^\circ$  on a circle of radius 8 meters?

10. Determine the period, midline and amplitude of the function  $y = f(t)$  graphed below. Note that the following points are on the graph:  $(-3, 6)$ ,  $(1, -2)$ ,  $(5, 6)$ ,  $(9, -2)$ , and  $(13, 6)$ .

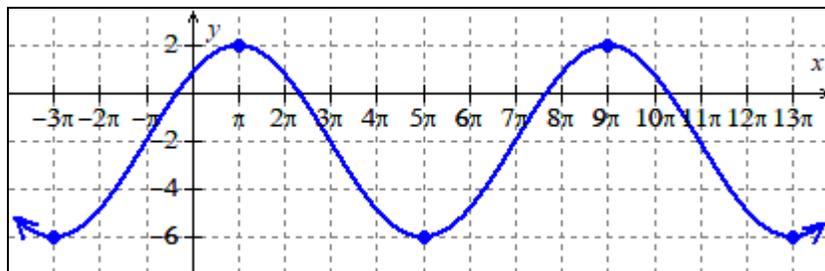

The graph of  $y = f(t)$ .

11. Determine the period, midline and amplitude of the function  $y = g(t)$  graphed below. Note that the following points are on the graph:  $(-\frac{2\pi}{3}, 0)$ ,  $(0, -12)$ ,  $(\frac{2\pi}{3}, 0)$ , and  $(\frac{4\pi}{3}, -12)$ .

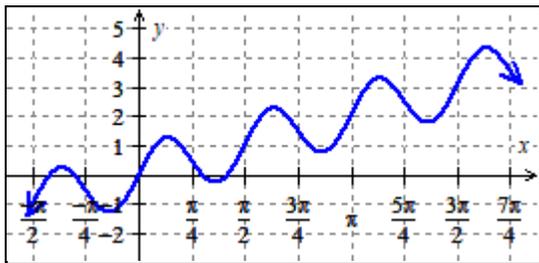

The graph of  $y = g(t)$ .

12. Determine the period, midline and amplitude of the function  $y = p(x)$  graphed below. Note that the following points are on the graph:  $(-3\pi, -6)$ ,  $(\pi, 2)$ ,  $(5\pi, -6)$ , and  $(9\pi, 2)$ .

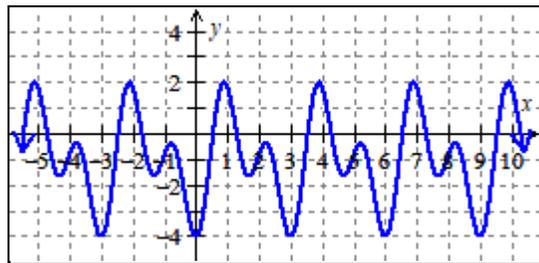

The graph of  $y = p(x)$ .

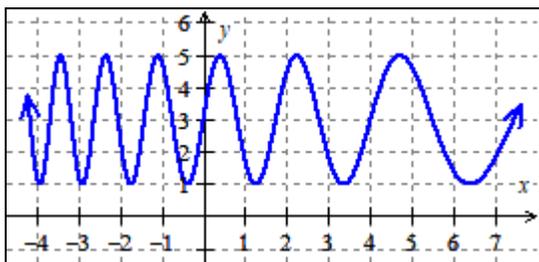

13. Determine which of the functions graphed below are periodic functions and find the period, midline, and amplitude of the periodic functions.

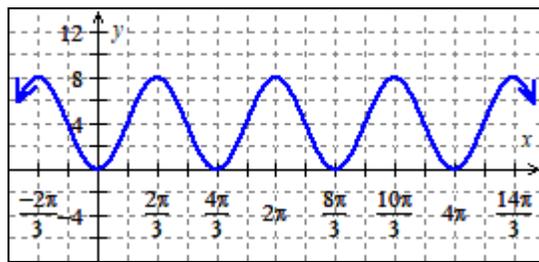

$y = A(x)$

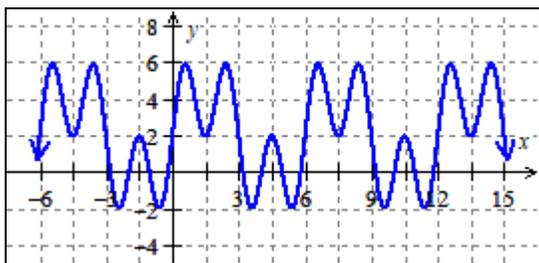

$y = B(x)$

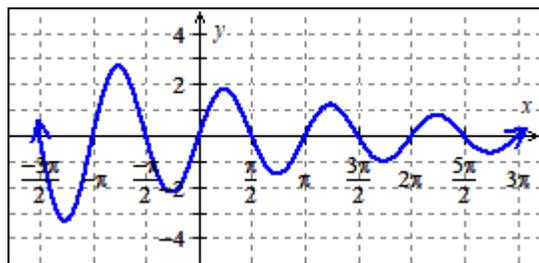

$y = C(x)$  is

$y = D(x)$

$y = E(x)$

$y = F(x)$

14. There's a Ferris wheel with a diameter of 80 feet. The wheel rotates at a constant rate, and completes a full rotation every 20 minutes. The wheel is lifted 10 feet above the ground level, and passengers load into carriages at the lowest point in the wheel's travel (so passengers start their trip 10 feet above the ground). Determine the period, midline and amplitude of the function that associates amount of time a passenger spends in a carriage travelling around the wheel with the height (in feet) above the ground of such a passenger.
